Amandeep Bhupal, Siddarth Palagrahara Chandrashekar, Upadnya
Chavarkar)

Issues Encountered

There were few issues we encountered while building this project and they are as follows:

1. Initializing up the 5 children and its parent and keeping track of them was one of the issues we encountered. It had a lot of nested if-else statements. We used fork() function and once we understood it completely we easily got our way around it and It helped us to generate the child processes in a loop mechanism which saved a lot of time and effort.
